

Performance Shropshire Consortium

A linebred breeding program for Western Range Commercial Ram production that combines American and English Shropshire Bloodlines is at the core of the group. The Program utilizes NSIP management practices and our Genetic Convergence parameters.

We have a new affiliated partner as part of the Consortium to run the program operation and have moved our Knepp-Lafollette operating base to Dixon, Wyoming. The breeding and ram testing base will be run by Jock Sheehan, who also will be building a ewe flock from our base at his Roaring Fork Sheep LLC operation.

Over the past couple of years Jock has been using Shropshire rams on a portion of his 1900 head western range flock, some of the rams from us, as well as Cody Hiemke and Rick Adams. The superior muscling and growth, along with hardiness of the rams has directed his decision to become involved as a Shropshire Commercial Ram breeder. See website on the joint program being followed:
